Professional Summary

Final-year Bachelor's student in Information Management with hands-on full-stack development experience across Python, PHP, Java, Flutter, and SQL databases. Built and deployed practical projects including a real-time Nepali ANPR system using YOLOv8 and a Custom CNN, and an AI-powered travel platform with a Retrieval-Augmented Generation (RAG) chatbot. Seeking a software engineering internship where I can contribute to secure, scalable backend systems in a fintech environment.

Education

Tribhuvan University

Bachelor in Information Management

2022 – Expected 2026

NCCS Secondary School

Computer Science (High School)

2020 – 2022

Technical Skills

- **Programming Languages:** Python, Java, JavaScript, Dart (Flutter)
 - **Web & Mobile Technologies:** PHP, HTML5, CSS3, TailwindCSS, Bootstrap, Flutter, RESTful APIs
 - **Databases:** MySQL, Supabase
 - **AI / Machine Learning & Computer Vision:** YOLOv8, OpenCV, EasyOCR, RAG, Prompt Engineering
 - **Tools & Platforms:** Git, GitHub
-

Experience

Freelance Full-Stack Developer - Kathmandu Foods (Client Project)

- **Live:** kathmandufoods.eu
 - **Stack:** *PHP (Laravel), MySQL, JavaScript, HTML5, CSS3*
 - **Description:** Independently building and deploying a production B2B wholesale e-commerce platform end-to-end for a client covering database, backend, frontend, authentication, and deployment. Implemented role-based B2B authentication with login-gated tiered pricing, a searchable product catalogue with category and brand filtering, an interactive map-based regional filter, and bulk-order handling, all in a responsive UI.
-

Projects

1. Automatic Number Plate Recognition System

- **Technologies:** *Python, YOLOv8, Custom CNN, OpenCV, EasyOCR*
- **Description:** Developed a real-time Automatic Number Plate Recognition system for Nepali license plates using YOLOv8 for detection and a Custom CNN with Devanagari support for character recognition, capable of processing both video streams and live camera feeds. Achieved 98% detection accuracy and 73% character-recognition accuracy on a dataset of over 20000 annotated plate images and character images.

2. AI-Powered Travel Platform

- **Technologies:** *PHP, Bootstrap, HTML, MySQL*
 - **Description:** Engineered a scalable travel booking platform allowing users full CRUD control over bookings and destination data, ensuring efficient data handling, responsive UI and integrated with a Retrieval-Augmented Generation (RAG) chatbot for intelligent travel recommendations and contextual responses. Implemented user authentication and input validation to ensure secure data handling.
-

Certification

Building with the Claude API – Anthropic Academy

Covered Claude API integration, prompt engineering, RAG, MCP, tool use, and AI agents.
