Portfolio: <https://nishant-koirala.github.io/>

Summary / Objective

Final-year Bachelor's student in Information Management with experience building projects in Python, PHP, Flutter, and full-stack development. Developed practical applications including a high-accuracy ANPR system, Korean language learning app and full-stack travel platform. Have basic knowledge of AI, Machine Learning, data handling, and problem-solving. Seeking opportunities to apply technical skills and contribute to impactful data-driven and AI projects in a collaborative environment.

Education

Tribhuvan University

Bachelor in Information Management

Kathmandu, Nepal

2022 – Expected 2026

NCCS Secondary School

Computer Science (High School)

Kathmandu, Nepal

2020 – 2022

Technical Skills

- **Programming Languages:** Python, Java, JavaScript, Dart (Flutter)
 - **Web & Mobile Technologies:** PHP, HTML5, CSS3, JavaScript, TailwindCSS, Bootstrap, Flutter
 - **Databases / Frameworks:** MySQL, Supabase, Bootstrap, TailwindCSS
 - **Tools & Platforms:** Git, GitHub
-

Projects

1. ANPR System

- **Technologies:** Python, YOLOv8, EasyOCR, OpenCV
- **Description:** Developed a Automatic Number Plate Recognition system capable of detecting Nepali license plates in real-time. Implemented YOLOv8 for vehicle and license plate detection and OCR for character recognition, achieving robust performance under varying lighting and motion conditions.

2. Korean Learning App

- **Technologies:** Flutter, Supabase
- **Description:** Developed a mobile app to learn Korean using Flutter for the frontend and Supabase for backend services, enabling users to practice vocabulary, track progress, and engage with interactive lessons.

3. Travelling Website

- **Technologies:** PHP, Bootstrap, HTML, MySQL
- **Description:** Engineered a scalable travel booking platform allowing users full CRUD control over bookings and destination data, ensuring efficient data handling and responsive UI.
